Tepper-Efka E-Commerce platform

Online shopping is the problem for the retail crisis! That's the opinion of many retailers. Webshops decrease the sales of traditional retail shops. However, is this conclusive?

Tepper-Efka BV is a specialist in the retail industry for car accessories and tuning parts. It develops and enhances shopping concepts. Concepts that focus on connecting the various business channels. Concepts that combine new opportunities and existing methods instead of rejecting or neglecting them. Cross-channel optimization. Customer-orientated, target focused and efficient. The organization and our financial and operational systems are up for the task!

The Tepper-Efka BV e-commerce platform makes synergy possible. The platform offers retailers the chance to use multiple sales channels simultaneously. Customers and end-users are approached and assisted effectively. Using webshops and shop-in-shop formulas reduces stock and extends the product range at the same time. Tepper-Efka BV guides and facilitates existing and new sales channels with the on-going process to guarantee continuity and expansion.

Due to the many years of experience Tepper-Efka BV knows how to effectively anticipate market developments, build on opportunities and avoid unnecessary risks. That time has come. Shopping whenever, wherever and how customers prefer. That is our future. The facts speak for themselves: Online shopping is booming.

Webshops ~~decrease~~ increase the sales of traditional retail shops.

Change the outcome!

Request a non binding orientation meeting now!
